

WP D1 — How much has Germany warmed?

Plot the annual series as a time series and overlay a 10-year moving average so the trend shows without the year-to-year noise. Then compute the decadal means and show them as anomalies relative to the 1961–1990 reference period. Output: two figures + one sentence like “the last decade was about 1.9 °C warmer than 1881–1910”. Effort: small.

Milestones / Deliverables

1. Checkpoint: analysis runs in your scratch, Fig 1 + Fig 2 as draft(s), one sentence with a number.
2. Final (documented in the notebook): Fig 1 + Fig 2 done + key figures; plus 2–3 sentences — what I computed, what the figure shows, why it looks that way, and how you can see it in the numbers.
3. Submission-ready: code runs top to bottom on “Restart & Run All”, fig1_*.png / fig2_*.png in figures/, pushed (or sent to the integrator).

Template: projekt_schritte.md Block 2. Work in a copy of the scratch (scratch_<yourname>.ipynb), start from ../data/clean/temp_annual_regions.csv.
